RIDGERUNNER™

A New Generation of Wildland Apparatus

Fire departments no longer need to compromise performance to accommodate their wildland requirements. The KME RidgeRunner™ offers stationary pumping performance up to 1,500 GPM in addition to numerous Pump & Roll options and water tank capacities up to 1,000 gallons. The combination these attributes is also packaged with a short wheelbase, even with a four door cab, to provide a fully functional, fully NFPA 1901 compliant apparatus to respond on road or off.

FEATURES

- Safety and Reliability Built in to Every Unit
- Designed to Provide the Lowest Center of Gravity
- Fabricated Bodies from Galvanealed Steel, Aluminum and Stainless Steel
- 29" Deep Compartments Standard with 200 Cubic Feet of Storage
- On-Site Tilt Table Testing Available to Verify a Safe Overall Design
- Standard Stationary Pumping Plus Pump and Roll
- Pump & Roll Available at 750 Engine rpm or Walking Speed
- Tilt Table Tested at 30 Degrees and Fully Loaded

TOOLBOX TO GO ANYWHERE

Similar trucks are notorious for having small compartments, not the KME RidgeRunner™. The rig features 29" deep compartments and 200 cubic feet of enclosed storage space. The RidgeRunner™ has room for a full-length extension ladder, roof ladder, and folding ladder which allows you to get full ISO credit as a pumper.

SUPERIOR PUMP CAPABILITY

Most manufacturers make you choose: you can have big pump capacity, but you have to stomp on the accelerator to get decent water pressure for rolling attack. Or you can have great rolling attack, but you can't move big water. The KME RidgeRunner™ provides pump & roll capacity at personnel walking speeds.

SURE-FOOTED PERFORMANCE

This truck has been tested to more than 30 degrees of tilt under the expected loading. While your performance will vary with your specific configuration and equipment, be assured that the KME RidgeRunner™ is safe and stable regardless of the terrain or weather presented on your mission.
