ELLIPTICAL TANKER

Value and Performance.

The KME Elliptical Tanker is equipped with short wheelbases and a low center of gravity to provide a safe and functional apparatus design. Starting with the economical LE tanker, or the sensible LX tanker, through any custom designed Elliptical Tanker, KME considers proper weight distribution, center of gravity and chassis components to ensure the safest, most reliable tanker product available today.

Every Elliptical Tanker is custom designed to your department's specific demands to combine tank capacities up to 4,000 gallons. Large pumping systems provide a Tanker Pumper combination unit to fulfill your department's requirements or economical pump packages for water shuttle designs. The KME Elliptical Tanker is available on most commercial chassis or any KME Custom Chassis product.

FEATURES

- Custom Configurations with Tank Capacities up to 4,000 Gallons
- Optimum Weight Distribution on Custom or Commercial Chassis
- Low Center of Gravity Tank Designs
- Maximum Equipment Storage Available
- Low Travel Heights Available, Even with Large Hose Load Requirements
- Multiple Dump Valve Options Available
- The "Safest" Tanker Attributes Available

STANDARD OPTIONS

A wide range of pumps are available from 250 gpm to 4000 gpm, in traditional mid-ship locations, or packaged inside the front body compartment to reduce length and wheelbase. Dump valves are available in the rear, as well as on each side of the apparatus in customizable locations forward to the axle(s), or between the tandem axles.

SAFETY STANDARD

Because keeping firefighters safe is our top priority, all tanks and apparatus are designed to exceed NFPA 1901 requirements. Our elliptical tanks utilize baffle designs that help ensure safe operations while driving the apparatus full, partial or empty of water. Tanks are also designed to provide rapid filling and dumping of water.

WIDE RANGE OF OPTIONS

KME Elliptical tankers can be built on a custom chassis or any commercial chassis available in the fire market. The tankers can be customized with storage in the fender, racks/enclosures for portable water tanks, storage for suction hoses, plus many more.
